there are many books on the care of the sick infant and some are excellent most however are written with medicine in mind this book is written mainly by experienced neonatal nurses although some chapters have been written by the appropriate specialists It is intended

primarily for nurses who look after sick infants and is not intended to be an exhaustive reference but to address some of the issues and concepts of neonatal care in the 1990s nursing models are an important part of neonatal care in the 1990s but this book has not been written within this framework there are several reasons for this arguably no current model is ideally suited to neonates and the favouring of one particular model might restrict the book's applicability also as contributors from other disciplines were invited to contribute we were anxious that these chapters did not stand out as oddities additionally much neonatal care overlaps and were a framework to be used in its entirety for each nursing care chapter we felt that there could be some repetition conversely if a framework was fragmented in some chapters to cover specific areas of care we were concerned that the overall effect would have been bitty we felt that such treatment of nursing models would have been unjustifiable in this book the terms infant and baby are used interchangeably and where the term he is used the term she is equally appropriate
